

Property Valuation & Analysis

In today's default market, there is a growing need for analytic tools to assist during critical decision points on non-performing loans. In order to meet that need, Keystone provides solutions focused on quality and technology, streamlining the decision making process.

Property Valuation Products and Analytics

Keystone offers a variety of valuation products, including interior and drive-by Broker Price Opinions (BPOs), Current Market Analysis (CMAs) and various appraisals to assist with property equity analytics. With an emphasis on technology and innovative quality procedures, our secure online proprietary system allows for ordering a diverse group of products, tracking key elements of the valuation process, and obtaining the finalized report. Prior to delivery, each report is reviewed and analyzed to provide accurate valuation data.

Nationwide MLS Data Search Reports

Clients performing loss mitigation analysis and post sales quality assurance reviews can turn to Keystone for our Nationwide Multiple Listing Service (MLS) Data Search Reports to assist in determining intervention or alternatives, as well as foreclosure bidding or post-sale contractual listing obligations. This report may identify 45+ day delinquent loans, recent listing and/or sales history, gated community guidelines, or other valuable information required in the review process.

"Keystone is continually focused on delivering added value and process improvement for their clients. We find Keystone to be proactive on many challenges facing today's REO environment and consistently striving to achieve results above and beyond their client's expectations."
